

PORTFOLIO

SELECTED WORKS 2024-2026

Ayoub Azzouzi

Media Design · HEAD Genève
azzouzi.ayoub31@gmail.com

Interactive systems, physical objects and digital experiences, where bodies, space and machines overlap.

I design intuitive, low-barrier experiences that work without explanation, easy to pick up for people who don't identify as gamers or technologists.

EDUCATION

Master	Master of Arts HES-SO in Design, Media Design HEAD Genève, 2026 · Mention Excellent
Bachelor	Game Experience Design École de Design Nantes Atlantique

01	KA KI KU KE KO Diploma project · Collective controller	03
02	Decentralized Intelligence Master thesis · A Lesson from the Sea Star	06
03	Re:Bloom Soft robotics · Presence detection	07
04	Absolute Stop Motion AR · Stop motion · Cinema	09
05	Certainty 3D animation · Identity · Mortality	11
06	Da'ata VR · Gesture interaction · Rehabilitation	13
07	Unchained Monolith Interactive art · Alt controllers · E-waste	15
08	NavP Creative coding · Digital wellbeing	17

KA K I KU KE KO

A collective controller and game for five players, playable indoors and outdoors. Together, you solve a rapid succession of micro-games, each one requiring the group to move, tilt, shake, or rotate as one. Five bodies, one coordinated mind.

Context	Diploma project, HEAD Genève 2026
Tutor	Dominic Robson
Film	youtu.be/hGeewKo_fKQ

- MOBILE GAME
- SMARTPHONE SENSORS

INSPIRATION

Inspired by the decentralized nervous system of the sea star, where no central brain commands but each limb senses and responds locally, KA KI KU KE KO translates that logic into play.

HOW IT PLAYS

Each player holds a grip attached to the shared controller by ropes, while a smartphone mounted at the center runs the app. The micro-games use the smartphone's gyroscope, compass and accelerometer to turn physical actions into collective puzzle-solving.

MICRO-GAMES

The micro-games require quick understanding and adaptation as a whole. If one player doesn't get it, the group's understanding carries them through, a form of collective unconscious.

SPECIAL CHALLENGES

Occasionally, between micro-games, special challenges appear: two players switching places, or everyone jumping five times during the next game.

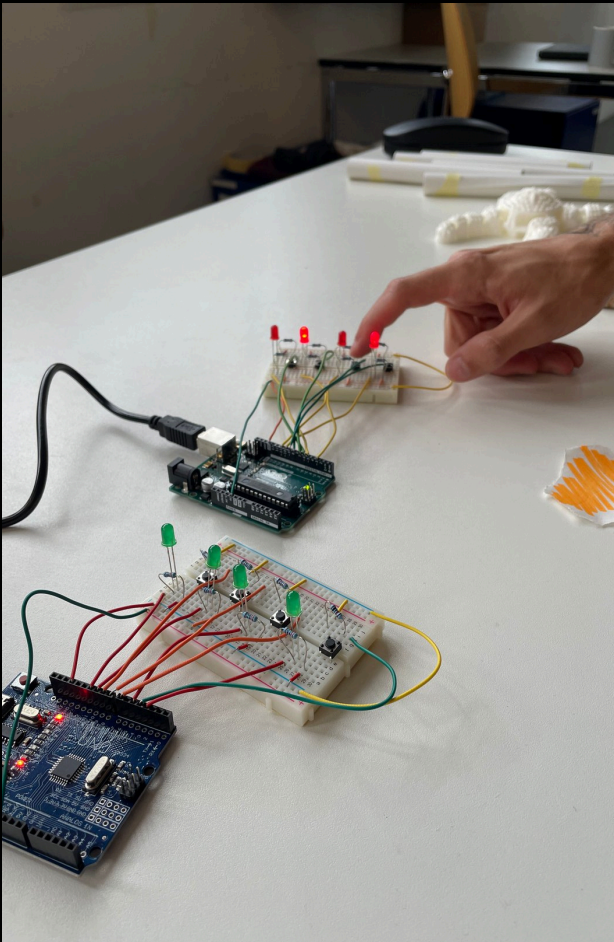

Decentralized Intelligence

A Lesson from the Sea Star

Sea stars have no central brain: each arm acts semi-independently yet coordinates with the whole. This thesis asks what that distributed logic might mean for how we design human-machine interaction. Drawing on embodied theory (Merleau-Ponty, Varela, Thompson & Rosch) and current HCI research, it proposes three speculative routes.

Context	Master thesis, HEAD Genève 2026
Tutor	Joëlle Bitton

- RESEARCH
- EMBODIED INTERACTION
- HCI

ROUTE 1

Involuntary signals

Breathing, posture, micro-tension reframed as input

ROUTE 2

Collective coordination

Emergent behavior from multiple actors without a conductor

ROUTE 3

Semi-independent

Distributed agency split across limbs or parts

Re:Bloom

A two-part soft robot built around shared living. One flower detects movement in the common area, the other stays in your room. When someone passes by, both retract. After a delay they bloom again: the space is clear.

Partner CNRS, O2R Project

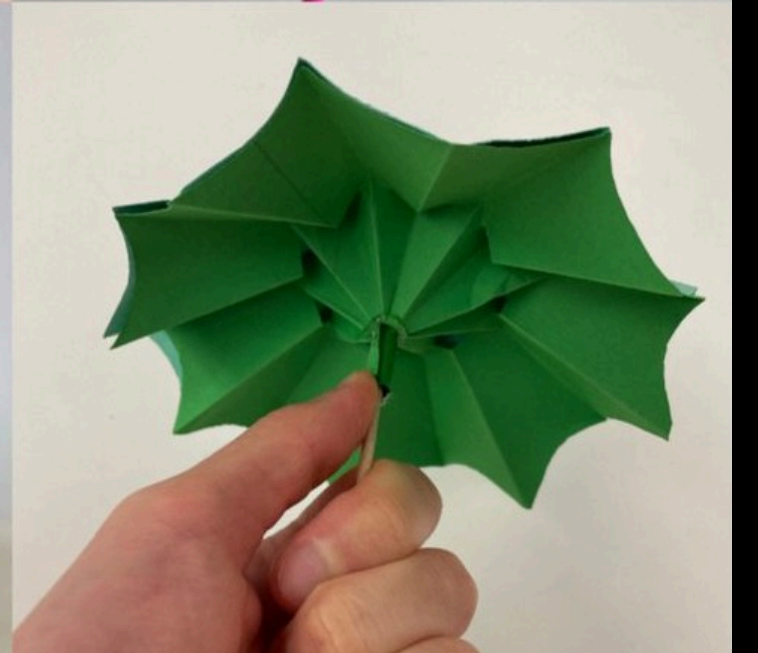

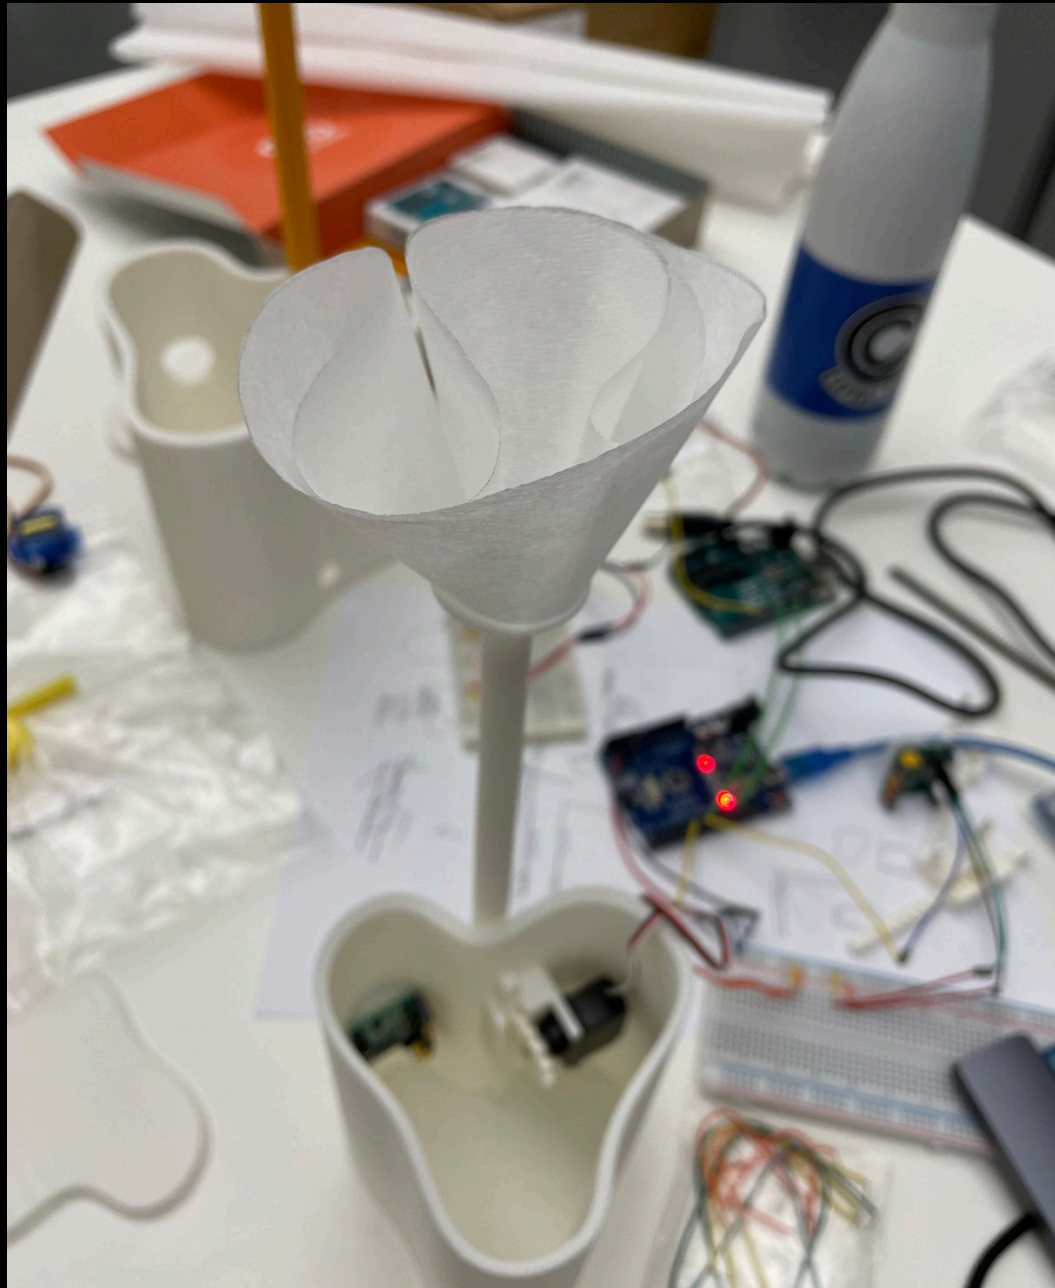

SOFT ROBOTICS

ARDUINO

3D PRINTING

SENSOR DESIGN

Absolute Stop Motion

A compact stop-motion station enhanced with augmented reality. The physical rig handles frame by frame shooting, the AR layer adds cinematic context. Finished sequences are saved directly to a smart device.

AUGMENTED REALITY

UNITY

BLENDER

STOP MOTION

Certainty

A group animation in which the doppelgänger, as a symbol of the soul after death, moves through the five stages of accepting mortality. Explored through ZBrush sculpting and Unreal Engine.

UNREAL ENGINE

ZBRUSH

MOTION CAPTURE

SOUND DESIGN

Da'ata

A VR game where the world responds entirely to hand gestures. Twisting the wrist attracts or repels floating objects, sustained movement grows terrain. Designed with motor rehabilitation in mind.

Support Swiss Paraplegic Foundation

VR

GESTURE INTERACTION

REHABILITATION

Unchained Monolith

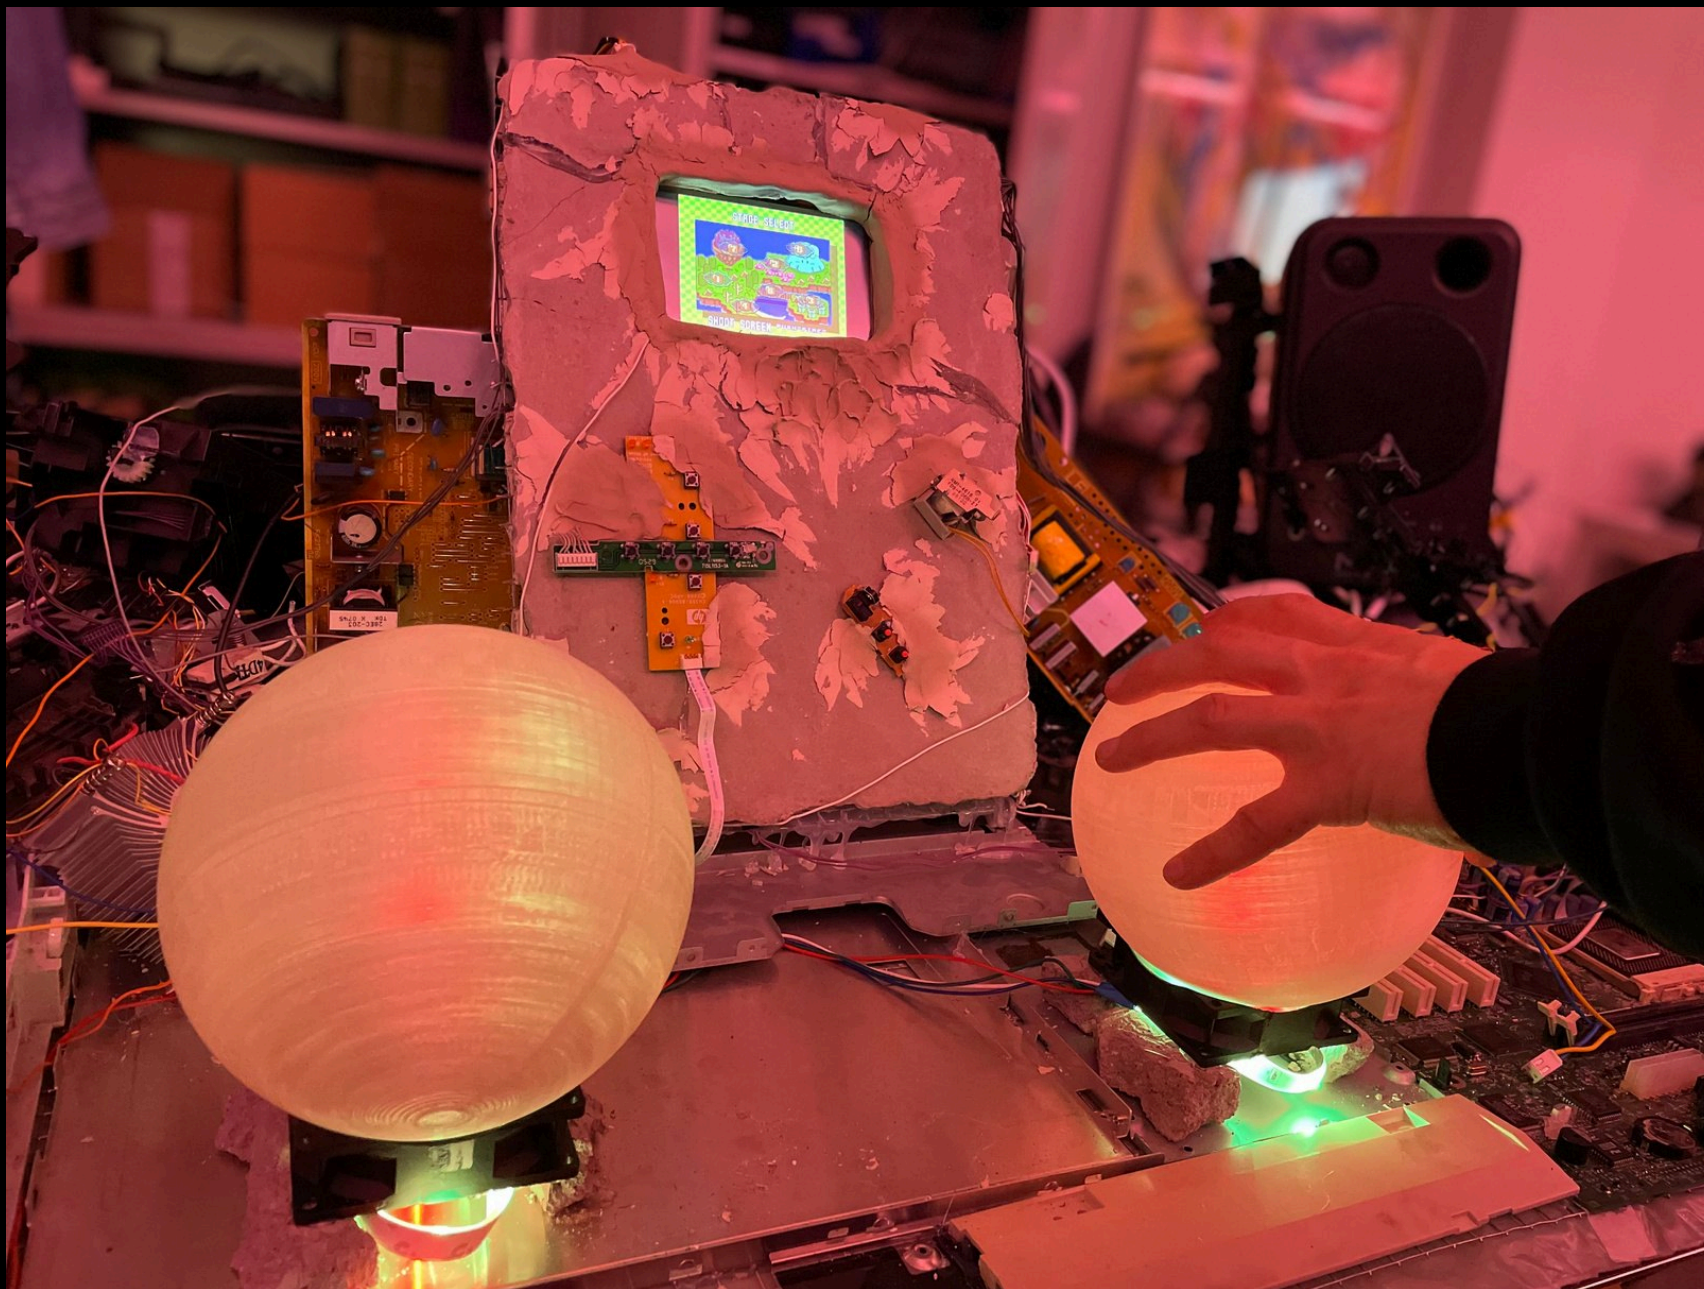

An old game console buried in discarded electronics becomes the input device. No instructions: players probe wires and components to rediscover familiar games through unfamiliar means.

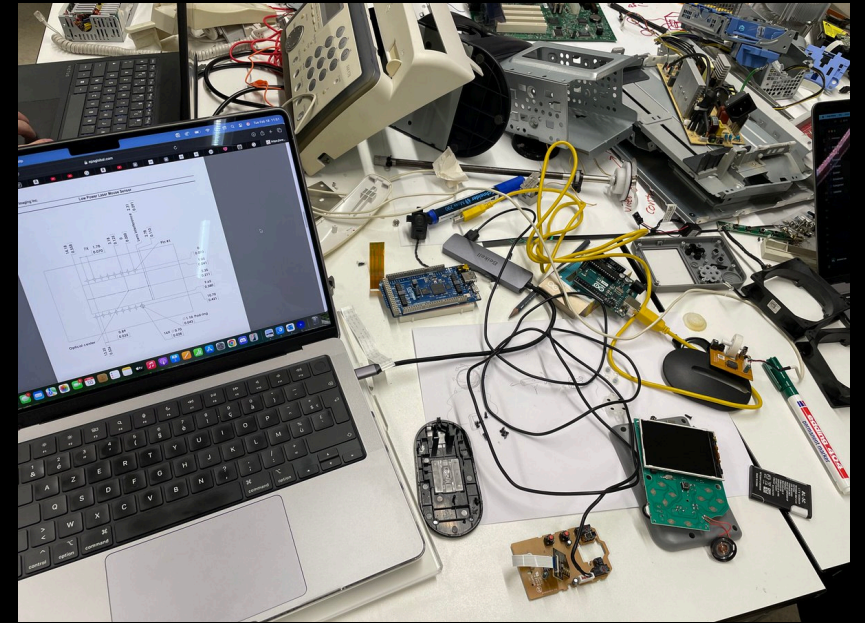

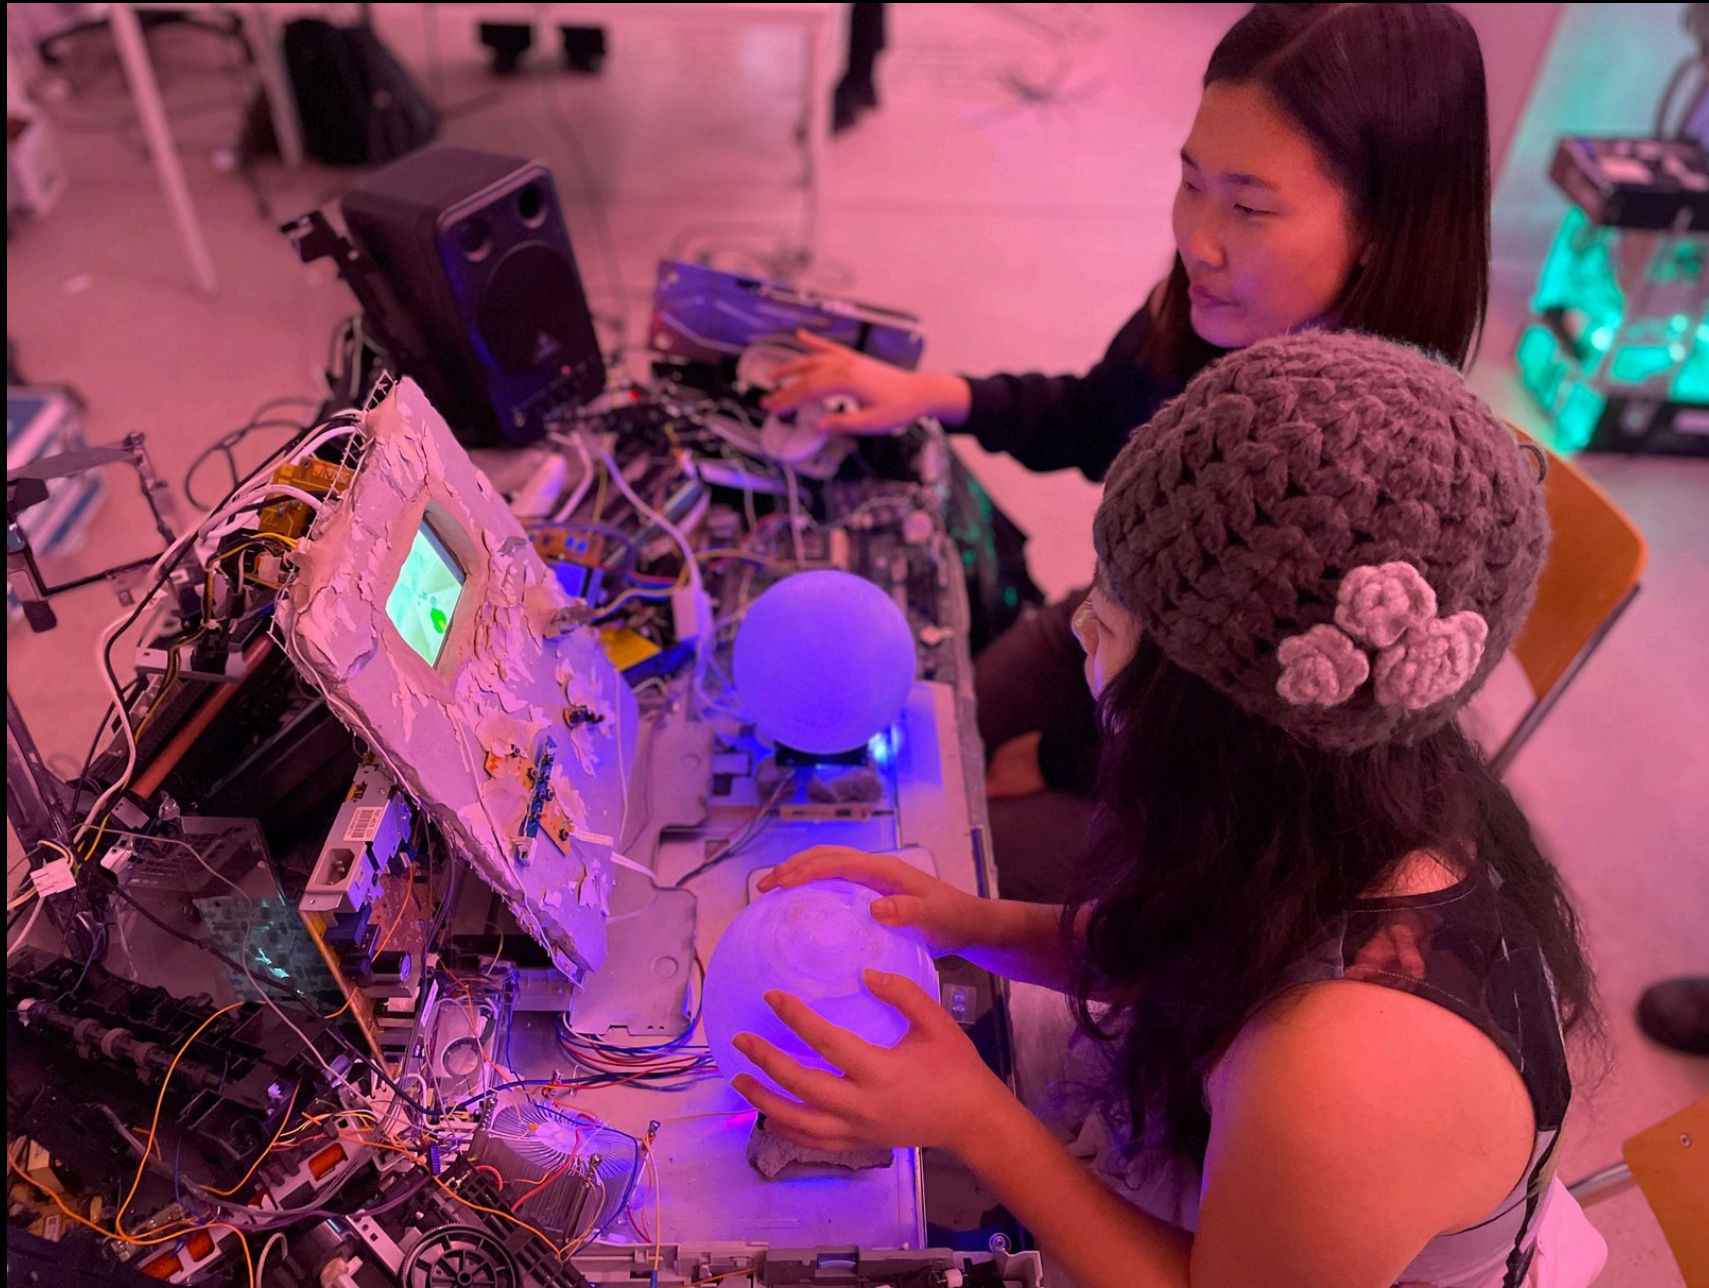

Workshop Led by @cyrus_khalatbari and @afranemakof

ALTERNATIVE CONTROLLER

ARDUINO

E-WASTE

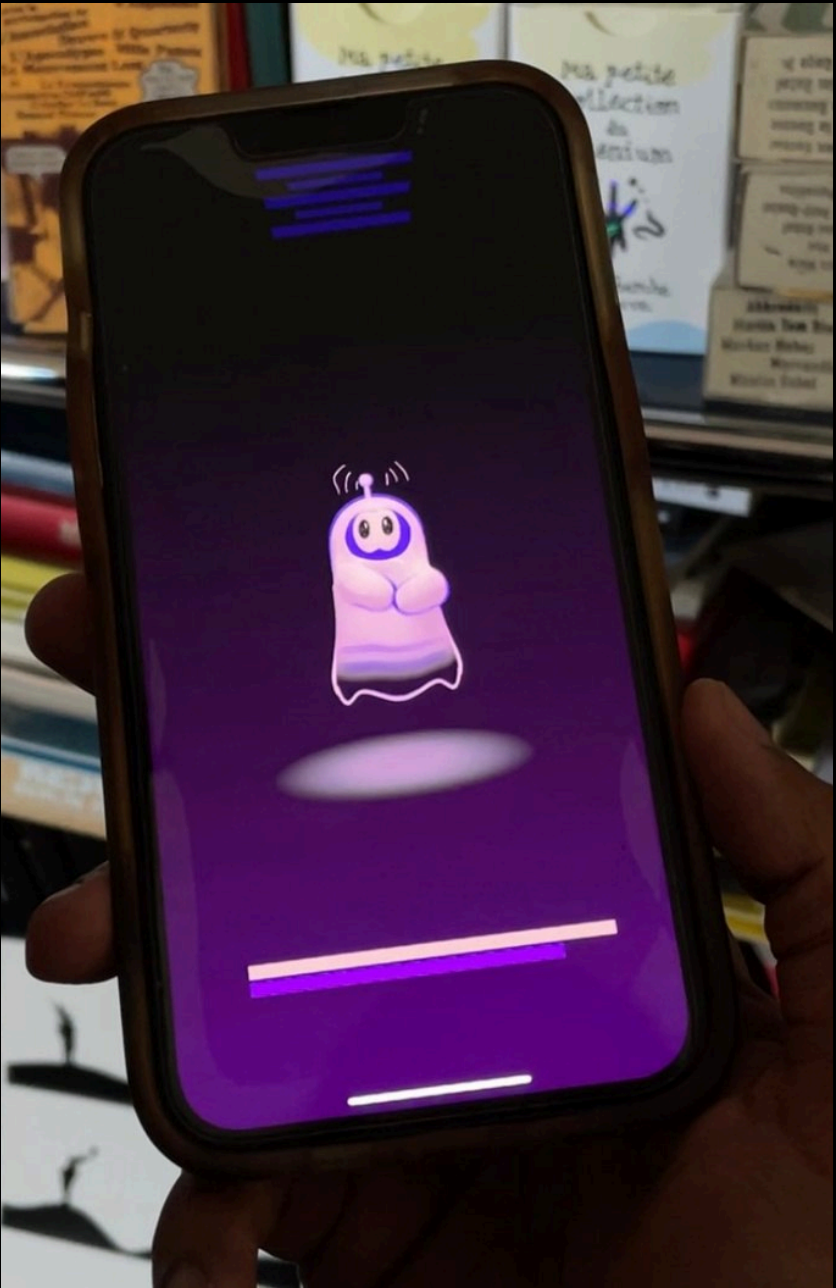

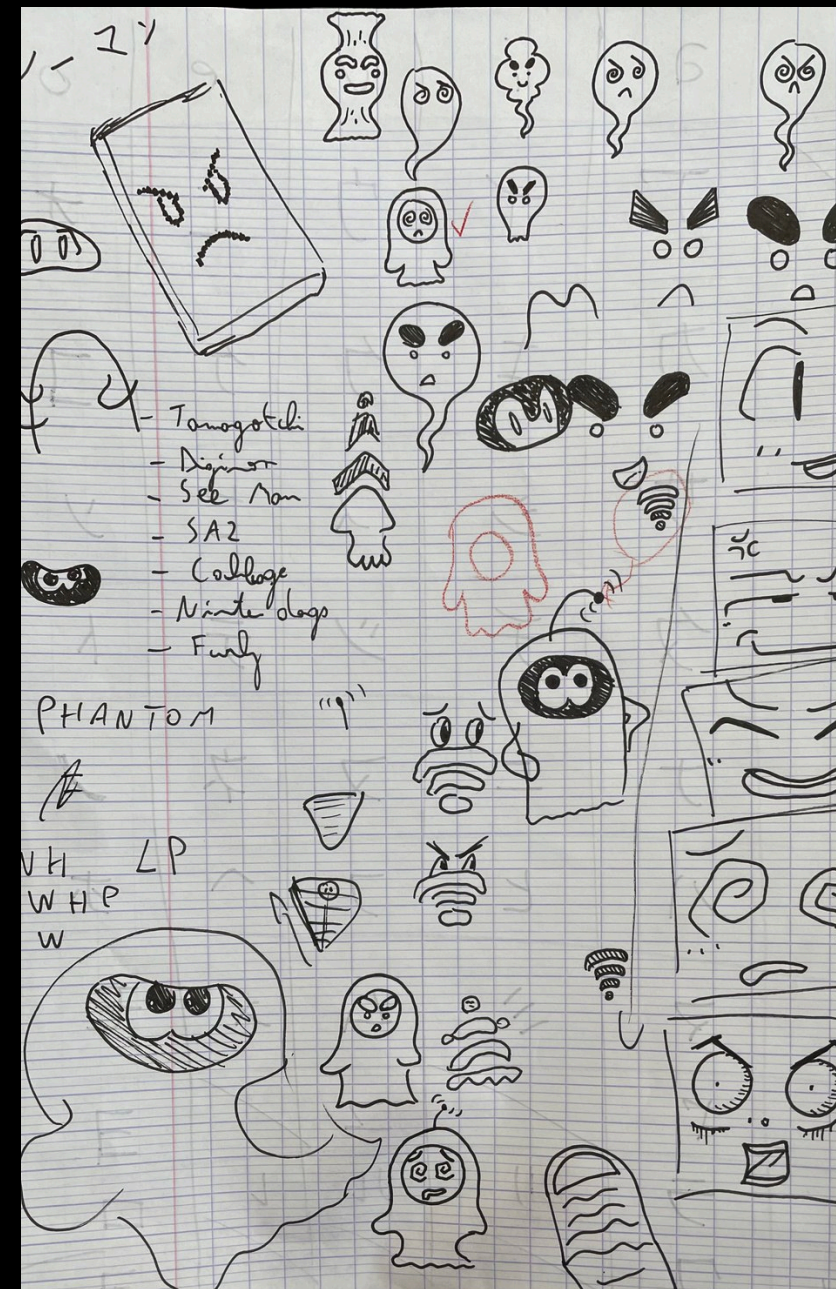

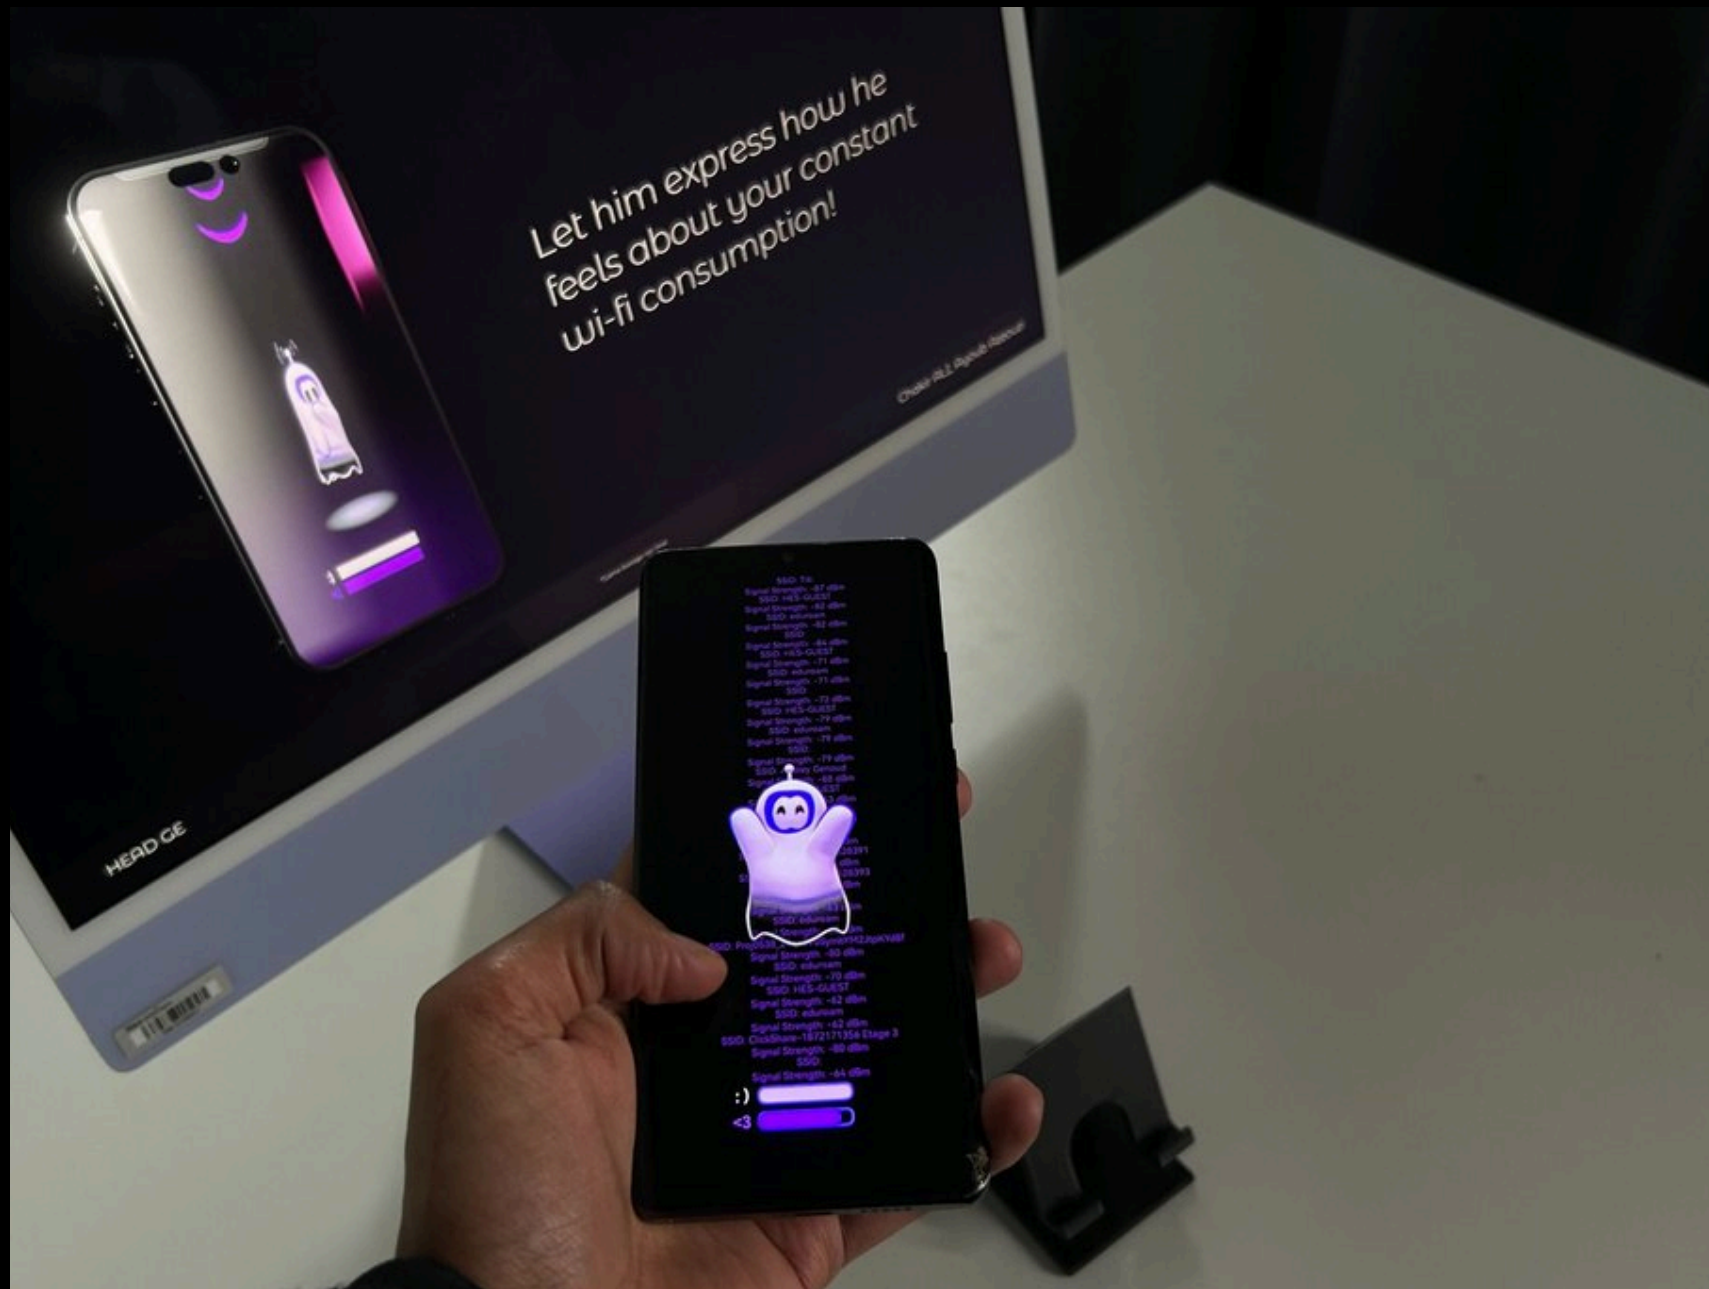

NavP

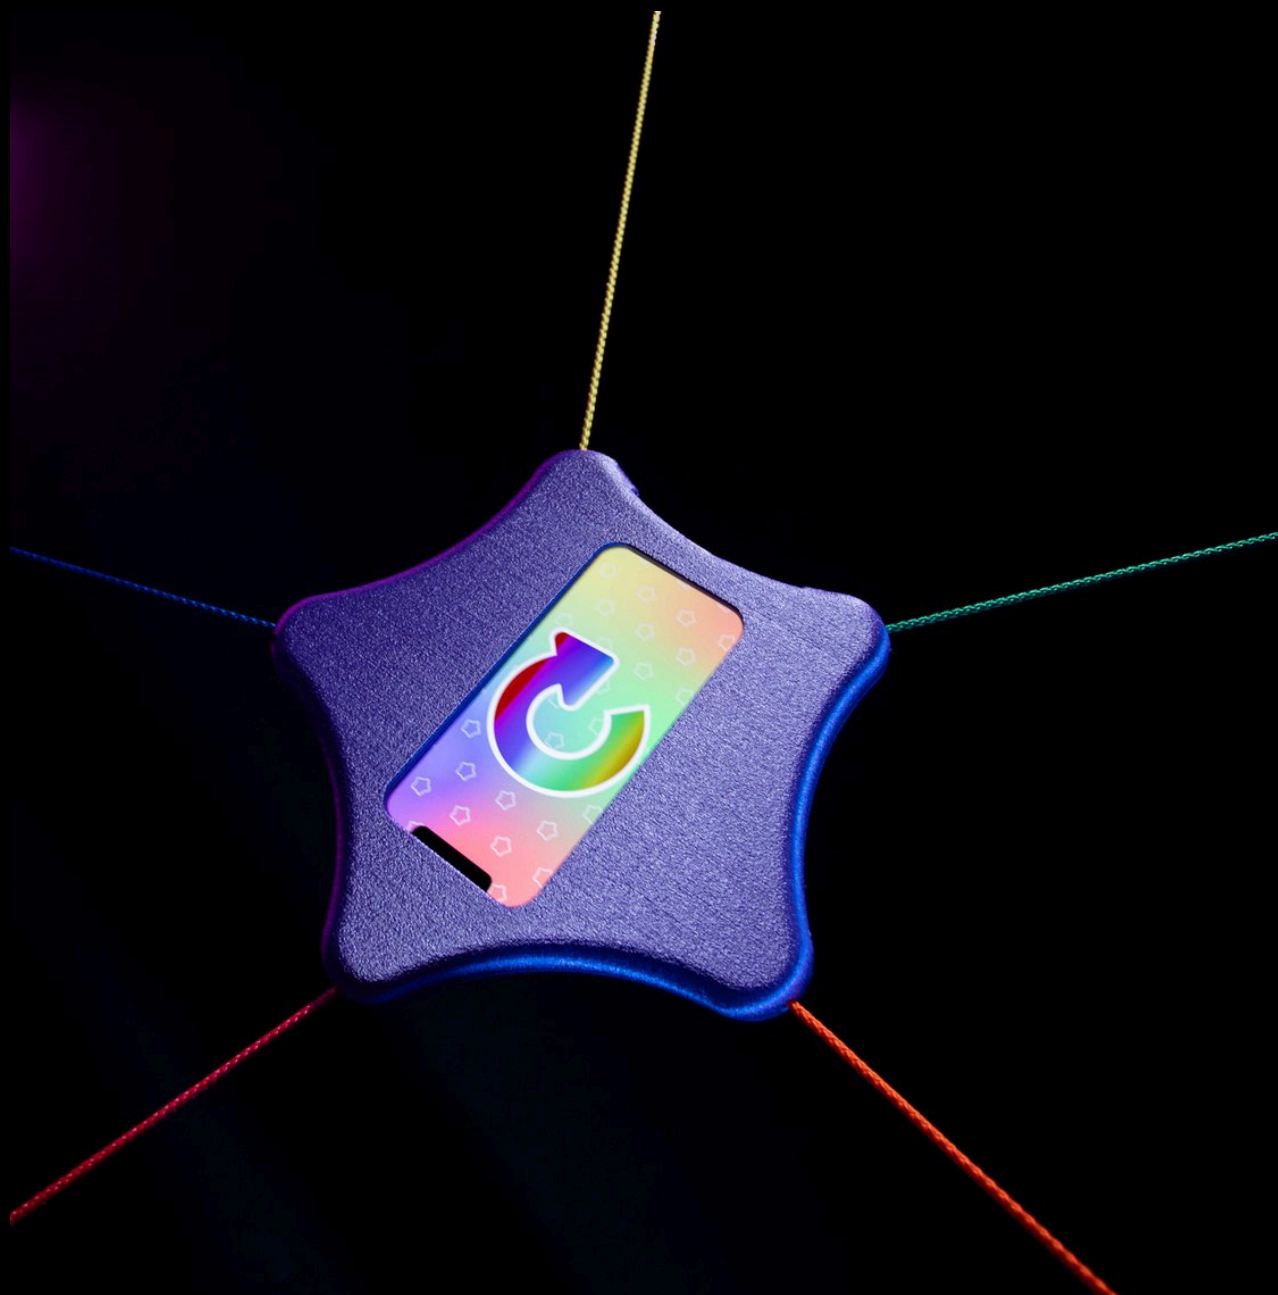

A digital companion that thrives on disconnection.
NavP reads Wi-Fi signal strength and ambient light,
rewarding offline behavior with visible happiness.
Screen-time management as a caretaking relationship.

With @grisastre

- CREATIVE CODING
- HERTZIAN SPACE
- DIGITAL WELLBEING
